POLISH ARMAMENTS GROUP

The BOR-7.62 bolt-action sniper rifle is fed by 7.62 x 51 mm NATO (.308 Winchester). The rifle is equipped with a universal mounting rail for embedding the optical sight and a set of Picatinny rails for mounting other devices (e.g. night vision adjuster or other devices). The weapon is equipped with an effective muzzle break, a folding bipod and a rear support. The rifle is designated for precise shooting up to 1200 m against live force or lightly armored military equipment.

Main characteristics:

- high efficiency of firing (high accuracy)
- low recoil force (because of muzzle brake)
- free-floating barrel
- small weapon length (bull-pup system) in comparison with the rifles constructed in classical system (with the same overall barrel length in both systems)
- high manoeuvrability (low weight, size, centre of gravity located above the pistol grip)
- trigger mechanism with very high reliability (low inertia of firing mechanism components)
- bolt which is resistant for „dry” firing – without shell in cartridge chamber

TECHNICAL DATA

Ammunition	7,62 x 51 mm NATO (.308 Winchester)
Range	1000 - 1600 m
Lenght	980 mm
Barrel lenght	660 mm
Weight	5,7 kg
Magazine capacity	10/5 rounds/cartridges
